

MOJAVE DESERT AIR QUALITY MANAGEMENT DISTRICT

14306 Park Avenue Victorville, CA 92392-2310
760.245.1661 -- 800.635.4617 -- FAX 760.245.2022

INACTIVE

B013408

Inactive type Permit has no description information.

EXPIRES LAST DAY OF: MARCH 2022

OWNER OF OPERATOR (Co.#2073)

Cutting Edge Agregates, Inc.
18020 National Trails Highway
Oro Grande, CA 92307

EQUIPMENT LOCATION (Fac.#3911)

Cutting Edge DBA Owl Rock Products - Oro Grande
19409 National Trails Highway
Oro Grande, CA 92368

Description:

CRUSHING AND SCREENING PLANT, PORTABLE consisting of: A 400 ton per hour crushing and screening plant with a receiving hopper, a jaw crusher, two cone crushers, a three-deck screen, and up to 13 conveyors:

EQUIPMENT

Capacity	Equipment Description
260	Primary Jaw Crusher with Feeder
200	Cone Crusher #1
200	Cone Crusher #2
125	Triple Deck Screen with Feeder
40	Stacker #1
25	Stacker #2
140	Conveyors, 36" x 60', Qty = 7
88	Water Pump and Misc Support Equipment

CONDITIONS:

1. This equipment must be installed, operated, and maintained in strict accordance with those recommendations of the manufacturer/supplier and/or sound engineering principles to produce the minimum emissions of contaminants. Unless otherwise noted, this equipment must also be operated in accordance with all data and specifications submitted with the application for this permit.
[District Rules 1302(C)(2)(a)]

Fee Schedule: 1 (d)

Rating: 1078 bhp

SIC: 1499

SCC: 30502001

Location/UTM(Km):
470E/3830N

This permit does not authorize the emission of air contaminants in excess of those allowed by law, including Division 26 of the Health and Safety Code of the State of California and the Rules and Regulations of the District. This permit cannot be construed as permission to violate existing laws, ordinances, statutes or regulations of this or other governmental agencies. This permit must be renewed by the expiration date above. If billing for renewal fee required by Rule 301(c) is not received by expiration date above, please contact the District.

Cutting Edge Agregates, Inc.
PO Box 398
Oro Grande, CA 92368

Brad Poiriez
Air Pollution Control Officer

2. This equipment must be mounted on chassis or skids and be able to be moved by the application of a lifting or pulling force. In addition, there shall be no cable, chain, turnbuckle, bolt or other means (except electrical connections) by which any piece of equipment is attached or clamped to any anchor, slab, or structure, including bedrock that must be removed prior to the application of a lifting or pulling force for the purpose of transporting the unit.
[Title 40 CFR 60.671]
3. This equipment shall not operate within 1900 meters of any offsite receptor without prior written authorization of the District.
[District Rule 1320]
4. This portable plant cannot be operated at the same location (footprint) for more than 12 consecutive months: It must be moved for a valid business reason at least once in every 12 month period.
[District Rule 203]
5. This equipment must be powered by either line power or by a District-permitted generator.
[District Rules 1302 and 1320]
6. Product throughput, measured at the initial drop point to the primary crusher, must not exceed 1,810,000 tons in any consecutive 12 month period.
[District Rule 1303]
7. A calibrated and non-resettable weigh belt must be installed to ensure the throughput limit is not exceed. It must be installed and include the initial Jaw Crusher and Jaw Crusher Bypass feeds. If this weigh belt becomes inoperable, the entire plant must be shut down immediately and the weigh belt must be repaired and returned to fully functional service prior to restarting the plant: No material shall be processed without being properly weighed with this weigh belt.? If more than one weigh belt is required to properly measure the initial drop, this condition applies to all such weigh belts.?
[District Rules 204 and 1303; District Regulation XII]
8. This facility must not emit more than 14.9 tons of PM10 in any consecutive twelve month period.
[District Regulation XIII - Offsets]
9. Water sprays or dust suppression mechanisms/systems must be used at all conveyor points of charge and discharge, crushers, feeders, and screens to control fugitive emissions. Through the use of water sprays, a minimum moisture content of one and one half percent (1.5%) shall be maintained throughout the plant and a minimum water pressure reading of 150 psig must be maintained at all water manifolds. The owner/operator must perform quarterly moisture content testing from random locations throughout the plant (belts, storage piles, etc.) and no additional water may be added to the samples prior to collection. This testing shall be conducted in accordance with ASTM C566-13. District inspectors may require additional samples be taken and tested during inspections if dusting is noticed.
[District Rules 1302 (C)(2)(a) and Rule 204]
10. This equipment must not discharge into the atmosphere an exhaust stream that exhibits greater than the following:
(a) Twelve percent (12%) opacity (6 minute rolling average) from the crushers; and,
(b) Seven percent (7%) opacity (6 minute rolling average) from all screening operations, transfer points and fugitive emission points. Emissions from initial Truck/Loader dumping into the initial crusher are not included in this requirement.
[40 CFR 60.672(b) and (d); Table 3 to 40 CFR 60, subpart OOO]
11. The owner/operator must perform monthly inspections of all wet suppression systems to verify that high pressure water is properly flowing through all discharge spray nozzles. The owner/operator must initiate corrective action within 24 hours and complete corrective action as expediently as practical if they find that water is not flowing properly during such inspections. The owner/operator must record each inspection of the water spray nozzles, including the date of each inspection and any corrective actions taken, in the facility log required by condition 14.?
[40 CFR 60.674 (b)]
12. The owner/operator must conduct an initial compliance test per 40 CFR 60, Subpart OOO requirements, including opacity (USEPA

Method 9 or equivalent) testing as applicable for each fugitive emission point (transfer point or other) associated with this equipment. The initial compliance test must be conducted no later than 180 days following initial startup. Compliance test shall be carried out in accordance with the test methods defined in 40 CFR 60.11, 40 CFR 60, Subpart OOO, Section 60.675, and the District Compliance Test Procedural Manual.
[40 CFR 60.672]

The owner/operator must submit a compliance/certification test protocol at least thirty (30) days prior to the compliance/certification test date. The owner/operator must conduct all required compliance/certification tests in accordance with a District-approved test protocol. The owner/operator must notify the District a minimum of ten (10) days prior to the compliance/certification test date so that an observer may be present. The final compliance/certification test results must be submitted to the District within forty-five (45) days of completion of the test. All compliance/certification test notifications, protocols, and results may be submitted electronically to reporting@mdaqmd.ca.gov

13. The owner/operator must conduct USEPA Method 22 Visible Emissions Observations on a weekly basis while the plant is in operation.? If any dusting is noticed, a full USEPA Method 9 Visible Emissions Evaluation (VEE) shall be conducted.
[40 CFR 60, Subpart OOO, District Rules 204 and 1303]

14. A facility log must be maintained on-site for at least three (3) years and made available to District personnel upon request. This log shall contain, as a minimum:

- (a) Dates this equipment is moved from one location to another, and the new location in decimal degrees of latitude and longitude (lat/long - xx.xxxx/-yyy.yyyy);
 - (b) Total tons of product produced per month and per each consecutive twelve-month period (for each permit unit, if not co-located);
 - (c) Date and Results of each quarterly moisture content test required by condition 9;
 - (d) Monthly water spray system inspection records required by condition 11;
 - (e) Maintenance and break down records associated with all water spray systems;
 - (f) Records of 40 CFR 60, Subpart OOO initial compliance testing required by condition 12; and,
 - (g) Results of all weekly USEPA Method 22 observations and Method 9 Evaluations required by condition 13 (if any).
- [District Rules 204 and 1302]

15. In the event of any equipment malfunction or breakdown as defined in District Rule 430, the event must be reported to the District within one hour.
[District Rule 430]

16. Roadways, work areas and stockpiles must be kept wetted to control fugitive dust. Equipment to properly wet the material being processed must be maintained in operable condition, on-site, and used as necessary to assure compliance. This does not include the haul roads outside of a fenced facility.
[District Regulation IV]

17. This equipment must be operated in compliance with all applicable requirements of 40 CFR 60 Subpart OOO; Standards of Performance for Nonmetallic Mineral Processing Plants. In the event of conflict between Permit conditions and the requirements of 40 CFR 60 Subpart OOO, the more stringent requirements shall govern.
[District Rule 204]

18. This equipment shall not process any Hazardous Air Pollutant (HAP) containing material.?
[District Rules 1302 and 1320]

19. A facility wide Comprehensive Emission Inventory (CEI) for all emitted criteria and toxic air pollutants must be submitted to the District, in a format approved by the District, upon District request.
[District Rule 107(b); H&S Code 39607 & 44341-44342; and 40 CFR 51, Subpart A]?
