

MOJAVE DESERT AIR QUALITY MANAGEMENT DISTRICT

14306 Park Avenue Victorville, CA 92392-2310
760.245.1661 -- 800.635.4617 -- FAX 760.245.2022

INACTIVE

B013797

Inactive type Permit has no description information.

EXPIRES LAST DAY OF: JUNE 2021

OWNER OF OPERATOR (Co.#2583)

Jones Water Trucks dba JWT Site Management
24724 Quarry Road
Apple Valley, CA 92307

EQUIPMENT LOCATION (Fac.#4002)

JWT Site Management
24724 Quarry Road
Apple Valley, CA 92307

Description:

CRUSHING AND SCREENING PLANT, PORTABLE consisting of: A 500 ton per hour crushing and screening plant with one (1) primary jaw crusher (with magnet), one (1) primary cone crusher, one (1) secondary cone crusher, one (1) double-deck screen, two (2) triple-deck screens, a maximum of fifteen (15) conveyor belts, and a maximum of four (4) radial stacker belts.

EQUIPMENT

Capacity	Equipment Description
215	KPI Jaw Crusher, model 3144, serial number 417574, with permanent magnet separator (model CRP36, serial number CRP36-355) and an integral hopper
401	KPI Cone crusher, model K300-6203, serial number AA1811738. There is also a triple-deck screen represented as an integral component of this unit.
50	KPI 6 ft x 20 ft screen, model 6203-32LP, serial number S173860
60	Double-deck 8 ft x 20 ft screen, model W0361, serial number A2051A10007
300	JM 36 inch x 60 ft conveyors, 15 total at 20 bhp each
148	JM 36 inch x 100 ft Radial Stackers, 4 total at 37 bhp each
300	KPI Cone crusher, model GF-K300, serial number AA1812113

CONDITIONS:

Fee Schedule: 1 (d) Rating: 1144bhp SIC: 1442 SCC: 30502001 Location/UTM(Km): 488E/3830N

This permit does not authorize the emission of air contaminants in excess of those allowed by law, including Division 26 of the Health and Safety Code of the State of California and the Rules and Regulations of the District. This permit cannot be construed as permission to violate existing laws, ordinances, statutes or regulations of this or other governmental agencies. This permit must be renewed by the expiration date above. If billing for renewal fee required by Rule 301(c) is not received by expiration date above, please contact the District.

Jones Water Trucks dba JWT Site Management

Clovis, CA 93613

By: **COPY**
Brad Poiriez
Air Pollution Control Officer

1. This equipment must be installed, operated, and maintained in strict accordance with those recommendations of the manufacturer/supplier and/or sound engineering principles to produce the minimum emissions of contaminants. Unless otherwise noted, this equipment must also be operated in accordance with all data and specifications submitted with the application for this permit.
[District Rules 1302(C)(2)(a)]

2. This equipment must be powered by either line power or by a District-permitted generator.
[District Rules 1302 and 1320]

3. Annual throughput must not exceed 4,300,000 tons in any consecutive 12 month period. Daily throughput must not exceed 12,000 tons. Emissions in excess of these limitations will initiate BACT review.
[District Rules 1303 and 1320]

4. A calibrated and non-resettable weigh belt must be installed to ensure the throughput limit is not exceeded. It must be installed and include the initial Jaw Crusher and Jaw Crusher Bypass feeds prior to dropping into the first screen. If this weigh belt becomes inoperable, the entire plant must be shut down immediately and the weigh belt must be repaired and returned to fully functional service prior to restarting the plant: No material shall be processed without being properly weighed with this weigh belt.
[District Rules 204 and 1303; District Regulation XII]

5. This equipment cannot be operated at the same location for more than 365 consecutive days: It must be moved for a valid business reason at least annually.
[District Rule 1302]

6. This facility must not emit more than 14.9 tons of PM₁₀ in any consecutive twelve month period to remain below the offset threshold. The owner/operator must contact the District prior to increasing throughput to ensure this limit is not exceeded.
[District Rules 1302 and 1303]

7. Water sprays or dust suppression mechanisms/systems must be used to control fugitive emissions from this operation. Through the use of water sprays, a minimum moisture content of one and one half percent (1.5%) shall be maintained throughout the plant. The owner/operator must perform quarterly moisture content testing from random locations throughout the plant (belts, storage piles, etc.) and no additional water may be added to the samples prior to collection. This testing shall be conducted in accordance with ASTM C566-19. District inspectors may require additional samples be taken and tested during inspections if dusting is noticed.
[District Rules 1302 (C)(2)(a) and Rule 204]

8. The owner/operator must perform monthly inspections of all wet suppression systems to verify that water is properly flowing through all discharge spray nozzles. The o/o must initiate corrective action within 24 hours and complete corrective action as expediently as practical if they find that water is not flowing properly during inspection of water spray nozzles. The owner/operator must record each inspection of the water spray nozzles, including the date of each inspection and any corrective actions taken, in the facility log.
[40 CFR 60.674 (b), District Rule 1302]

9. The owner/operator shall ensure roadways, work areas, stockpiles, and materials being processed are kept wet to control fugitive dust. Equipment to properly wet the material being processed shall be maintained in operable condition on-site and used as necessary to assure compliance. This does not include the haul roads outside of a fenced facility.
[District Rules 401, 403, 1303]

10. This equipment shall not discharge into the atmosphere an exhaust stream that exhibits an opacity greater than the following:
 - (a) Twelve percent (12%) opacity (6 minute rolling average) from the crushers; and,
 - (b) Seven percent (7%) opacity (6 minute rolling average) from all screening operations, transfer points and fugitive emission points.Emissions from initial Truck/Loader dumping into the initial crusher are not included in this requirement.
[40 CFR 60.672(b) and (d); Table 3 to 40 CFR 60, Subpart OOO]

11. The owner/operator must conduct an initial compliance test per 40 CFR 60, Subpart OOO requirements, including opacity (USEPA Method 9 or equivalent) testing as applicable for each fugitive emission point (transfer point or other) associated with this equipment. The initial compliance test must be conducted no later than 180 days following initial startup. Compliance test shall be carried out in

accordance with the test methods defined in 40 CFR 60.11, 40 CFR 60, Subpart OOO, Section 60.675, and the District Compliance Test Procedural Manual.

[40 CFR 60.672]

The owner/operator must submit a compliance/certification test protocol at least thirty (30) days prior to the compliance/certification test date. The owner/operator must conduct all required compliance/certification tests in accordance with a District-approved test protocol. The owner/operator must notify the District a minimum of ten (10) days prior to the compliance/certification test date so that an observer may be present. The final compliance/certification test results must be submitted to the District within forty-five (45) days of completion of the test. All compliance/certification test notifications, protocols, and results may be submitted electronically to reporting@mdaqmd.ca.gov

12. The owner/operator must conduct USEPA Method 22 Visible Emissions Observations on each crusher, screen, and material transfer point on a monthly basis while the plant is in operation. Each observation shall be conducted for a minimum of 6 minutes. If any dusting is observed, the o/o shall take appropriate measures to control the dust such as wet suppression control or discontinue operation until the unit can operate without dusting. As an alternative, if dusting is observed, a full USEPA Method 9 Visible Emissions Evaluation (VEE) may be conducted to ensure compliance with the opacity limitations set forth in condition 10.

[40 CFR 60.672(b) and (d); Table 3 to 40 CFR 60, Subpart OOO and District Rules 204 and 1302]

13. A facility log must be maintained on-site for at least three (3) years and made available to District personnel upon request. This log shall contain, as a minimum:

- (a) Total tons of product produced per month and per each consecutive twelve-month period (for each permit unit, if not co-located);
- (b) Date and results of each quarterly moisture content test required by condition 7;
- (c) Monthly water spray system inspection records required by condition 8;
- (d) Maintenance and break down records associated with all water spray systems;
- (e) Records of 40 CFR 60, Subpart OOO initial compliance testing required by condition 11;
- (f) Results of all monthly USEPA Method 22 observations and Method 9 Evaluations (if required) required by condition 12; and
- (g) Dates and locations, in decimal degrees of latitude and longitude with a minimum of 4 decimal places accuracy, of every equipment relocation within the District.

[District Rules 204 and 1302]

14. The District shall be notified at a minimum of five (5) District working days prior to operation of this equipment at any location.

Notifications must be submitted via email to reporting@mdaqmd.ca.gov. At a minimum, the notification shall include the following:

- (a) Date(s) of operation;
- (b) Address of operation; and
- (c) Contact information.

[District Rule 1320 - NSR for Toxic Air Contaminants]

15. When this equipment is operated at any location (within the MDAQMD's jurisdiction) other than 25220 Quarry Road in Apple Valley, California, it shall not be operated closer than:

(a) 1000 feet (304 meters) from any Critical Receptor, defined as a School K-12 or Health Care Facility. Such operation will require the submittal of an application for a revised permit to operate so that the applicable requirements of the California Health and Safety Code Section 42301.6 will be met, and;

(b) 1000 feet (304 meters) from any residence.

[District Rule 1302 and H&S Code 42301.6 Permit Approval: Powers & Duties of APCO]

16. Equipment breakdowns, as defined within District Rule 430, shall be reported in accordance with District Rule 430.

[District Rule 430]

17. This equipment must be operated in compliance with all applicable requirements of 40 CFR 60 Subpart OOO: Standards of Performance for Nonmetallic Mineral Processing Plants. In the event of conflict between Permit conditions and the requirements of 40 CFR 60 Subpart OOO, the more stringent requirements shall govern.

[District Rule 204]

18.A facility wide Comprehensive Emission Inventory (CEI) for all emitted criteria and toxic air pollutants must be submitted to the District, in a format approved by the District, upon District request.
[District Rule 107(b); H&S Code 39607 & 44341-44342; and 40 CFR 51, Subpart A]
