(iii) No compliance determination shall be established based on data obtained from compliance testing, including integrated sampling methods, during a start-up period or shut-down period.

(iv) All ppmv emission limits specified above are referenced at dry stack-gas conditions and 3.0 percent by volume stack-gas oxygen.

(v) All lbs/MMBtu NO_x emission rates shall be calculated as pounds of nitrogen dioxide per MMBtu of heat input.

(vi) All emission concentrations and emission rates shall be based on hourly averages.
